

## Environmental weed risk assessment

### Potato (*Solanum tuberosum*)

Potato is a starchy tuber of *Solanum tuberosum* and is a root vegetable native to the Americas. It has a long history of domestication and is now the world's fourth most important food crop.

Potatoes are an important horticulture crop in Western Australia being the second highest value vegetable crop after carrots, and the second highest value-adding horticulture industry after the wine industry.

#### Weed lists

National-international:

- Not listed in Weeds of Australia (398 weed species) <https://weeds.org.au/weeds-profiles/>
- Not listed in Weeds of Australia website [Fact sheet Index \(lucidcentral.org\)](http://www.lucidcentral.org)
- In the Global Compendium of Weeds, potato is listed as an agricultural weed, casual alien, cultivation escape, environmental weed, garden thug, naturalised, weed (Randall 2017).

Western Australia:

- Not listed in Western weeds. A guide to the weeds of Western Australia (Hussey et al. 2007).
- Not listed in 'The naturalized vascular plants of Western Australia 1: Checklist, environmental weeds, and distribution in IBRA regions' (Keighery and Longman 2004).
- Not listed in Environmental weeds of Western Australia (Keighery 1991).

## Environmental weed risk assessment

Assessed using the 'Environmental weed risk assessment protocol for growing non-indigenous plants in the Western Australian rangelands' (Moore et al. 2022)

Region	Filter A	Filter B	Weed Risk Assessment rating
	Is the species a weed in similar environments in Australia or overseas?	Is the species likely to persist in the environment without management*?	
<b>Kimberley</b>	No	No	<b>Negligible to low</b>
<b>Pilbara</b>	No	No	<b>Negligible to low</b>
<b>Gascoyne – Goldfields</b>	No	No	<b>Negligible to low</b>
<b>Agricultural area</b>	No	No	<b>Negligible to low</b>

\*Without management means no fertiliser, Rhizobia, irrigation, grazing management or control of competition from other species
